SPRINTD ZÜRICH · EQUANS CASE · FROM TENDER TO PRICED OFFER

BidGenius AI

Every number. Backed by evidence.

From a 202-page tender to a price an estimator can defend — line by line.

Team BidGenius · October 2026

THE PROBLEM

One tender. 202 pages. One shot at the price.

202

pages of German tender text

Schulhaus Oberglatt · BKP 244 ventilation

679

line items to quantify, match and price

today: read and priced by hand

0

price negotiations after submission

„1.17 Preisverhandlungen ausgeschlossen." — tender p. 9

In a low-margin business, one missed line is the margin.

OUR ANSWER

Read. Match. Price. Defend.

1

Read

All 202/202 pages parsed on a laptop — a reviewable, priced draft in 55 seconds.

FEASIBILITY

2

Match

Every line linked to your catalogue and labour rules, with a visible confidence band.

TRACEABILITY

3

Price

Exact CHF maths: quantity × net price × waste, plus hours × site factors × rate.

IMPACT

4

Defend

Every number opens its PDF page. Every change needs a reason and creates a revision.

TRACEABILITY

AI proposes. Deterministic maths prices. The estimator decides — every number.

LIVE DEMO

Watch for three moments

1. **The honest number**
   what is priced and proven — and what is not, yet

2. **The page that says „Nicht Bestandteil dieser Submission“**
   and why BidGenius stops instead of pricing it

3. **The assumption that moves the price most**
   previewed live, applied with a reason, reversible

A price an estimator would trust

CHF 1’661’000

included-scope offer · 82.1% of estimated value priced · 5.5% margin · before VAT

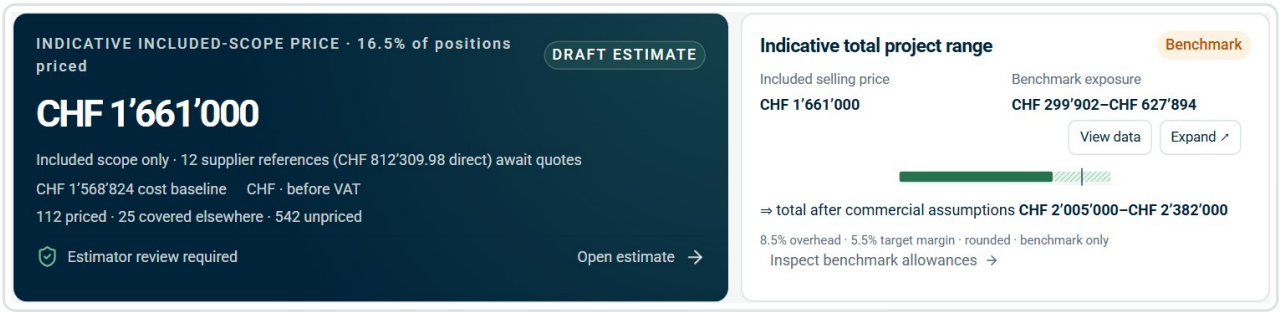

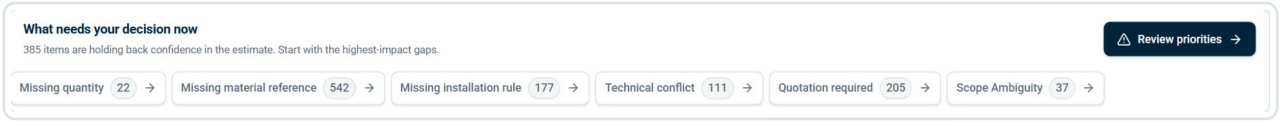

Priced & proven

Full scope CHF 2.01M–CHF 2.38M

Unpriced scope: CHF 300k–CHF 628k benchmark range — shown, never hidden inside the bid.

385 review items ranked by cause, 205 supplier quote requests drafted.

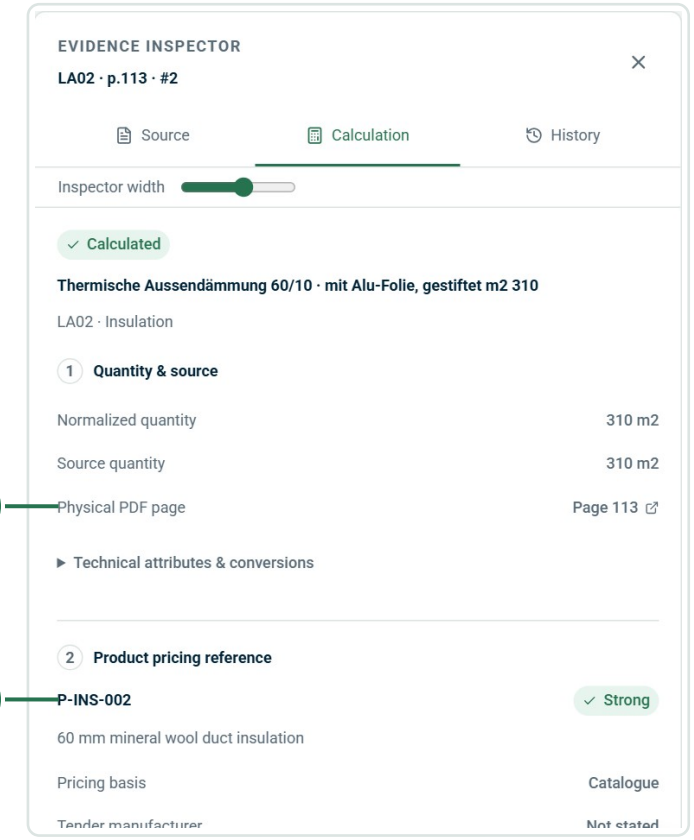

Most tools hand you a number. BidGenius hands you a number and its gaps.

TRACEABILITY · 20%

Every number links back to the tender

1 **Quantity → tender page**

310 m² read from PDF page 113. One click opens the page with the source line highlighted.

2 **Price → your catalogue**

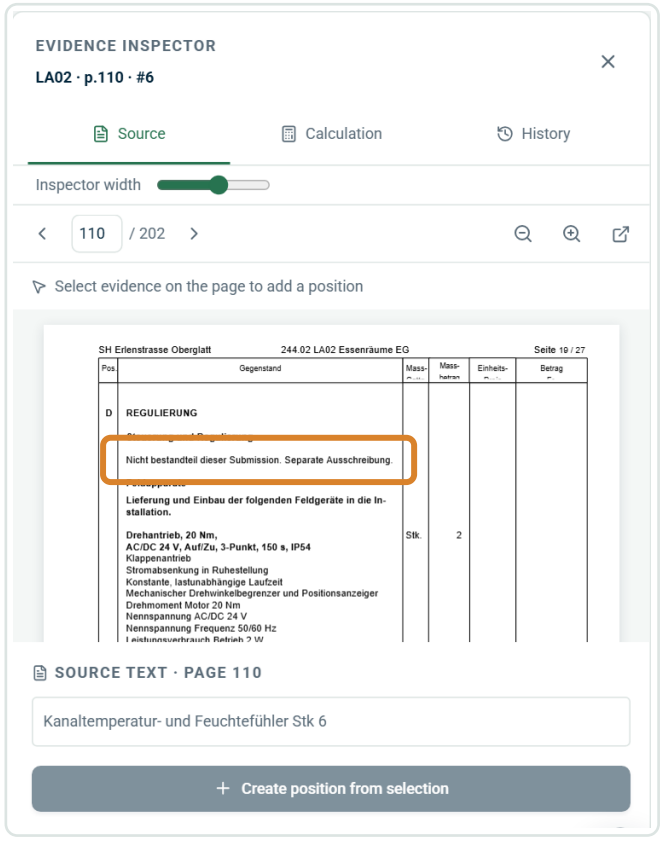

P-INS-002 from catalog.csv, match band “Strong”. A pricing reference — technical equivalence stays a separate decision.

3 **Labour → your productivity rules**

Base hours × site factors × role rate, unrounded hours, written out as a formula with its source rows.

The same for all 679 positions — and every change records owner, reason and CHF effect, reversible.

It knows when to stop

„Nicht Bestandteil dieser Submission. Separate Ausschreibung."

"Not part of this tender — tendered separately." Tender p. 110, repeated in every ventilation system.

A product matcher would price it anyway. BidGenius holds 37 positions for the estimator's decision:

Include	**Install only**	Exclude

— each with a reason, a new revision and a visible CHF effect.

That decision is what protects the margin.

IMPACT · FEASIBILITY

Measured, not claimed

22/22

verified example positions

quantity, unit, catalogue item and system all correct

80/83

hand-checked hold-out rows

100% of detected quantities correct

202/202

tender pages processed

one partial page flagged for visual review

55 s

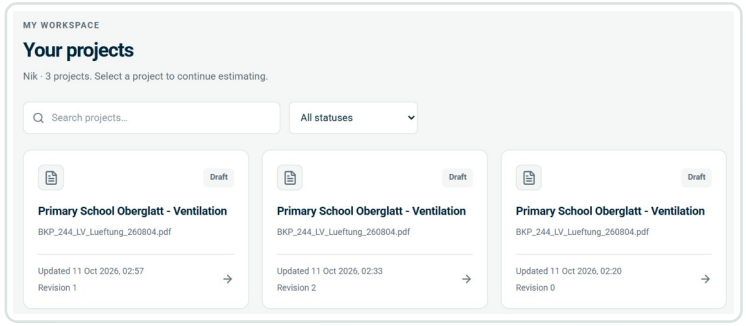

to a priced, reviewable draft

local parser, no AI calls, single laptop

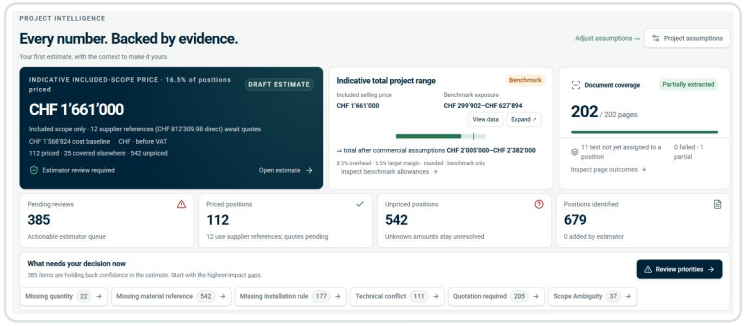

Sources: artifacts/evaluation.json · artifacts/live-holdout-evaluation.json · docs/VALIDATION.md. Sampled evidence — not a claim of whole-tender completeness.

Every claim on this slide can be re-run from the repository.

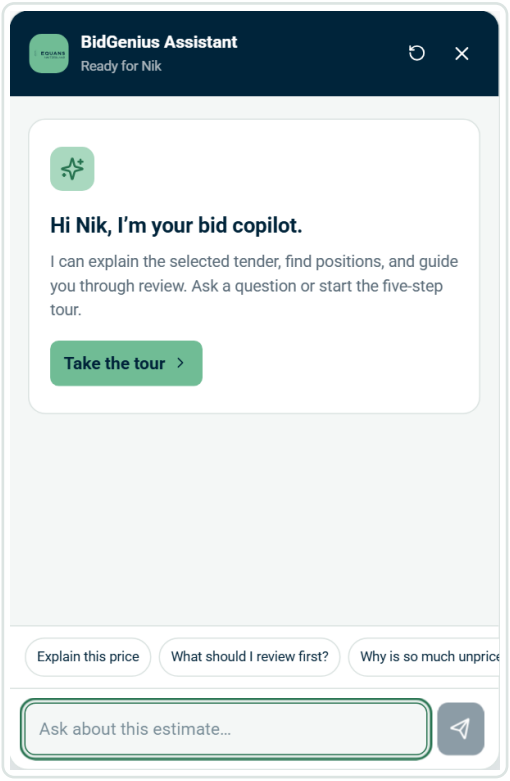

Usable without training

My workspace: every bid and its state

Overview: price, gaps, next decision

- **One question per page** Overview · Estimate · Scenarios · Export
- **Review queues by cause** missing quantity, quote needed, scope ambiguity…
- **Keyboard-first table** j/k to move · Enter to inspect · a to accept
- **Built-in copilot + 5-step tour** answers cite positions and pages

Equans look and feel. German source text where estimators expect it. No manual needed.

Three ideas we haven’t seen in estimating tools

1

An honest range, not a hidden gap

Unpriced scope becomes a benchmark band of CHF 300k–628k next to the bid — never inside it.

2

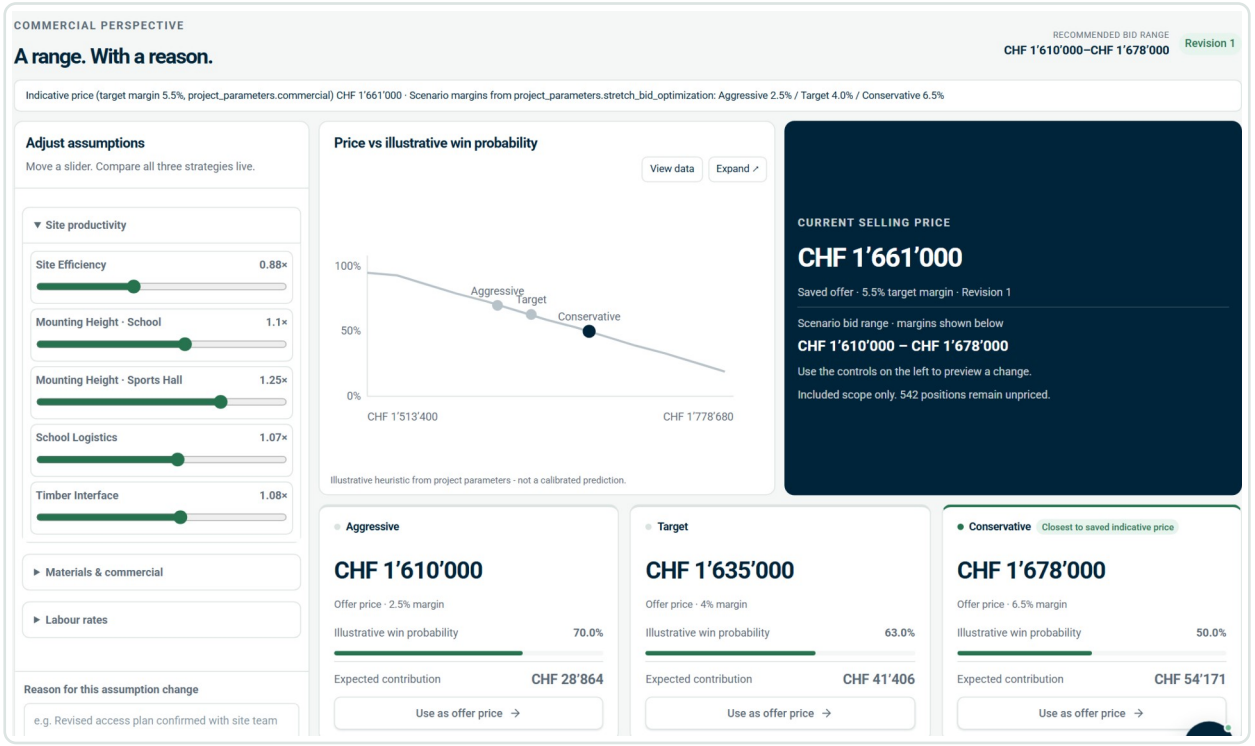

“Which assumption moves the price?”

Sensitivity across site efficiency, overhead, margin and rates — check the right thing before signing.

3

Every change is a revision

Preview live, apply with a reason, reverse anytime. The bid file explains itself.

Scenarios from your parameters: CHF 1’610’000 · 1’635’000 · 1’678’000 — odds labelled illustrative.

FEASIBILITY · 25%

Runs on Azure. Fits your bid process.

YOUR BID PROCESS

Tender in
PDF from the tender platform, original kept unchanged

→

Estimator review
queues, evidence, reasons, revisions

→

Bid manager sign-off
Management view: every bid, status, margin

→

Offer + RFQs out
German draft offer, CSV/JSON, supplier requests

ON AZURE — SAME CONTAINER AS TODAY

Azure Container Apps
the existing Docker image, single replica

→

Azure Files at /data
SQLite, originals, revisions, exports

→

Azure OpenAI
optional · store=false · bounded excerpts

→

Entra ID + PostgreSQL
estimator & management roles, multi-user

Runs offline on a laptop today. No integration needed — CSV/JSON into your calculation tool.

PATH TO PRODUCTION

From prototype to pilot in 90 days

30 DAYS

Prove the value

- Pilot on 5–10 past Equans tenders
- Measure time-to-draft vs. today
- Estimators score trust per position

60 DAYS

Connect your data

- Live catalogue and net prices
- Supplier quotes back into the bid
- Historical bids to calibrate win odds

90 DAYS

Run it as a team

- Entra ID roles and four-eyes sign-off
- Azure deployment with backups
- Hand-over into the calculation system

Same pipeline — coverage grows with your catalogue (prototype: 56 products, 22 labour rules).

BidGenius turns a 202-page tender into a price you can defend — line by line — and tells you exactly what it doesn't know yet.

IMPACT 30%	FEASIBILITY 25%	TRACEABILITY 20%	DESIGN 15%	CREATIVITY 10%
A price with an honest range	Same container → Azure	Every CHF → its PDF page	Four pages, no training	Knows when to stop

Thank you.

BACKUP · FOR Q&A

What we deliberately did not build — yet

No OCR or drawing take-off

Drawings and the Excel take-off are not in the package; missing quantities go to a queue instead of being guessed.

No automatic technical approval

“Fabrikat z.B. … oder gleichwertig” stays an explicit estimator decision, separate from the pricing match.

Nothing is sent

Supplier RFQs and the German offer are drafts; formal submission stays with the bid team.

Illustrative win odds

Heuristic from your project parameters until historical bids are imported and explicitly adopted.

Demo login

Role switch for the demo; production uses Entra ID.
